

Fueling Alaska's Workforce: Education that Connects Students to Industry

RDC Breakfast Presentation

March 20, 2025

Mission

Educate students about Alaska's natural resources.

Vision

Empower students to be informed stewards of Alaska's natural resources.

Values

- Innovation
- Collaboration
- Flexibility
- Fun

NEW YEAR, NEW LOGO!

1982-2009:

2009-2024:

2025:

K-12 EDUCATION

CLASSROOM VISITS

Guest teaching in schools across Alaska in person and on Zoom

YOUTH PROGRAMS

Deeper explorations in after school programs, STEM nights, & camps

TEACHER TRAININGS

Educating teachers about our resources and how to implement them in the classroom

ROCKS & MINERALS

ENERGY

FORESTRY

WHAT ARE OUR NATURAL RESOURCES?

WHERE DO THEY COME FROM AND HOW DO WE GET THEM?

WHAT ARE THE ASSOCIATED CAREERS?

Spark

Spark interest in learning about Alaska's resources

Ignite

Ignite passion for understanding connections to our resources

Launch

Launch into the next phase with the knowledge to make informed decisions

How do we extract and develop our resources?

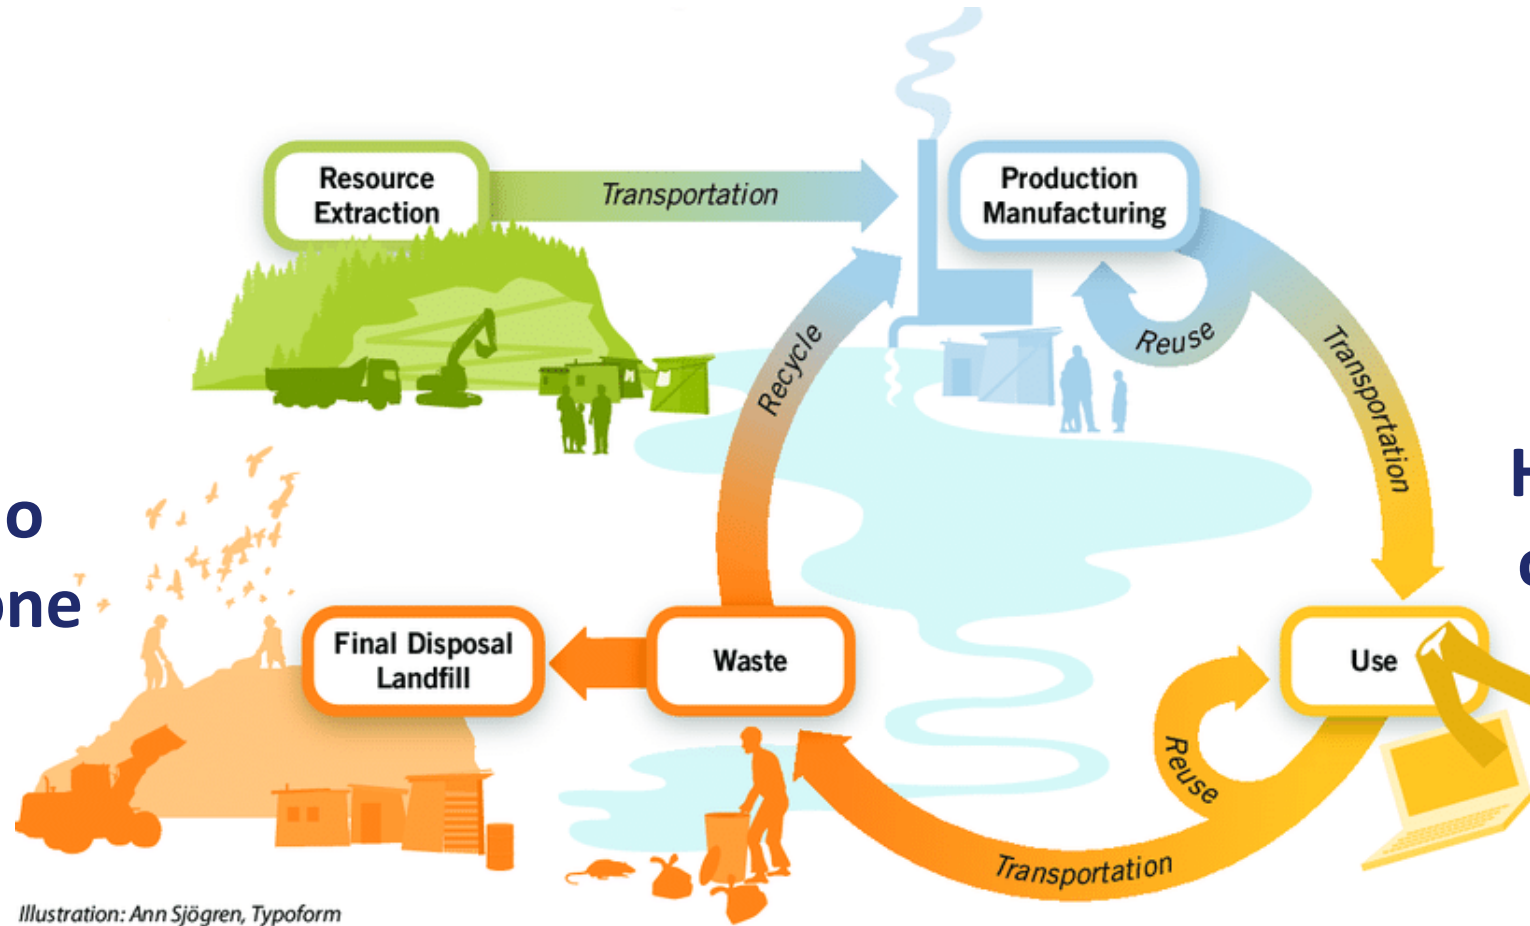

Illustration: Ann Sjögren, Typoform

What do we do once we are done with our resources?

How do we use our resources?

How do we do all this responsibly and sustainably?

Essential Question:

**How do we extract and
develop our resources?**

Let's go mining!

- Each community gets one **plot of earth**.
- Each member may select **one tool** to mine with: **shovel** (spoon), **excavator** (fork), or **pickaxe** (toothpick)
- On **signal** turn over permitted area [container], **remove lid**, and **start mining**.
- **WARNING**: All tailings must remain on the lid.
We need to protect the environment. Any spills outside the permitted lid area will result in substantial fines or possibly the shutting down of your mining operations!

1:00 minute to mine.

How well did you do?

- **Gold/yellow beads = gold = \$600**
- **Black beads = coal = \$300**
- **Orange beads = copper = \$400**
- **Pink beads = cultural resource = -\$500**
- **Sunflower seeds = reclamation = -\$100**

Considerations

Do companies go mining with **no** previous information about the land or geology?

Do companies choose their plan and equipment according to the type of mining they are doing?

Do mining companies have to pay to restore the land when they are done?

Two of the most important considerations for our resource extraction industries:

Safety

Permit Pursuit Environmental Baseline Discovery Lab

Permit Pursuit

➤ **Observe everything you see in your environment**

➤ **Collect the pertinent data using tools available**

➤ **Apply for your permits!**

No Single Permit to Mine: There are many permits & authorizations

Mine permitting is a mixture of State, Federal and local permitting requirements.

Each project is unique.

STATE	FEDERAL		
Plan of Operations (DNR)		US EPA Air Quality Permit review	US EPA Safe Drinking Water Act (UIC Permit)
Reclamation and Bonding (DNR)			
Waste Management Permits and Bonding (ADEC)			
CWA Section 402 APDES Water Discharge Permit	US ACOE S. 404 Dredge and Fill Permit	US ACOE S. 10 Rivers and Harbors Act	US ACOE S. 106 Historical & Cultural Resources Protection
Certification of ACOE Permits (ADEC)			
Sewage Treatment System Approval (ADEC)			
Air Quality Permits (ADEC)	NMFS Threatened & Endangered Species Act Consultation	NMFS Marine Mammal Protection Act	NMFS Essential Fish Habitat
Fish Habitat and Fishway Permits (ADF&G)			
Water Rights (DNR)			
Right of Way/Access (DNR/DOT)	NMFS Fish and Wildlife Coordination Act	USFWS Threatened & Endangered Species Act Consultation	USFWS Bald Eagle Protection Act Clearance
Tidelands Leases (DNR)			
Dam Safety Certification (DNR)			
Cultural Resource Protection (DNR)			
Monitoring Plan (Surface/Groundwater/Wildlife) (DNR/DEC/DFG)		USFWS Migratory Bird Protection	USFWS Fish & Wildlife Coordination Act

Example: Fort Knox – 104 permits and 11,000 conditions

Essential Question:

**How do we use our
resources?**

Energy

Source:

Where the energy came from in nature

Energy

Type:

Useable energy form

RENEWABLE SOURCES

Sun (solar)

Wind

Water (Hydro)

Plants & Animals
(Biomass)

Geothermal

ELECTRICITY

FUEL

HEAT

NON-RENEWABLE SOURCES

Oil

Natural Gas

Coal

Energy Chains

With your table group:

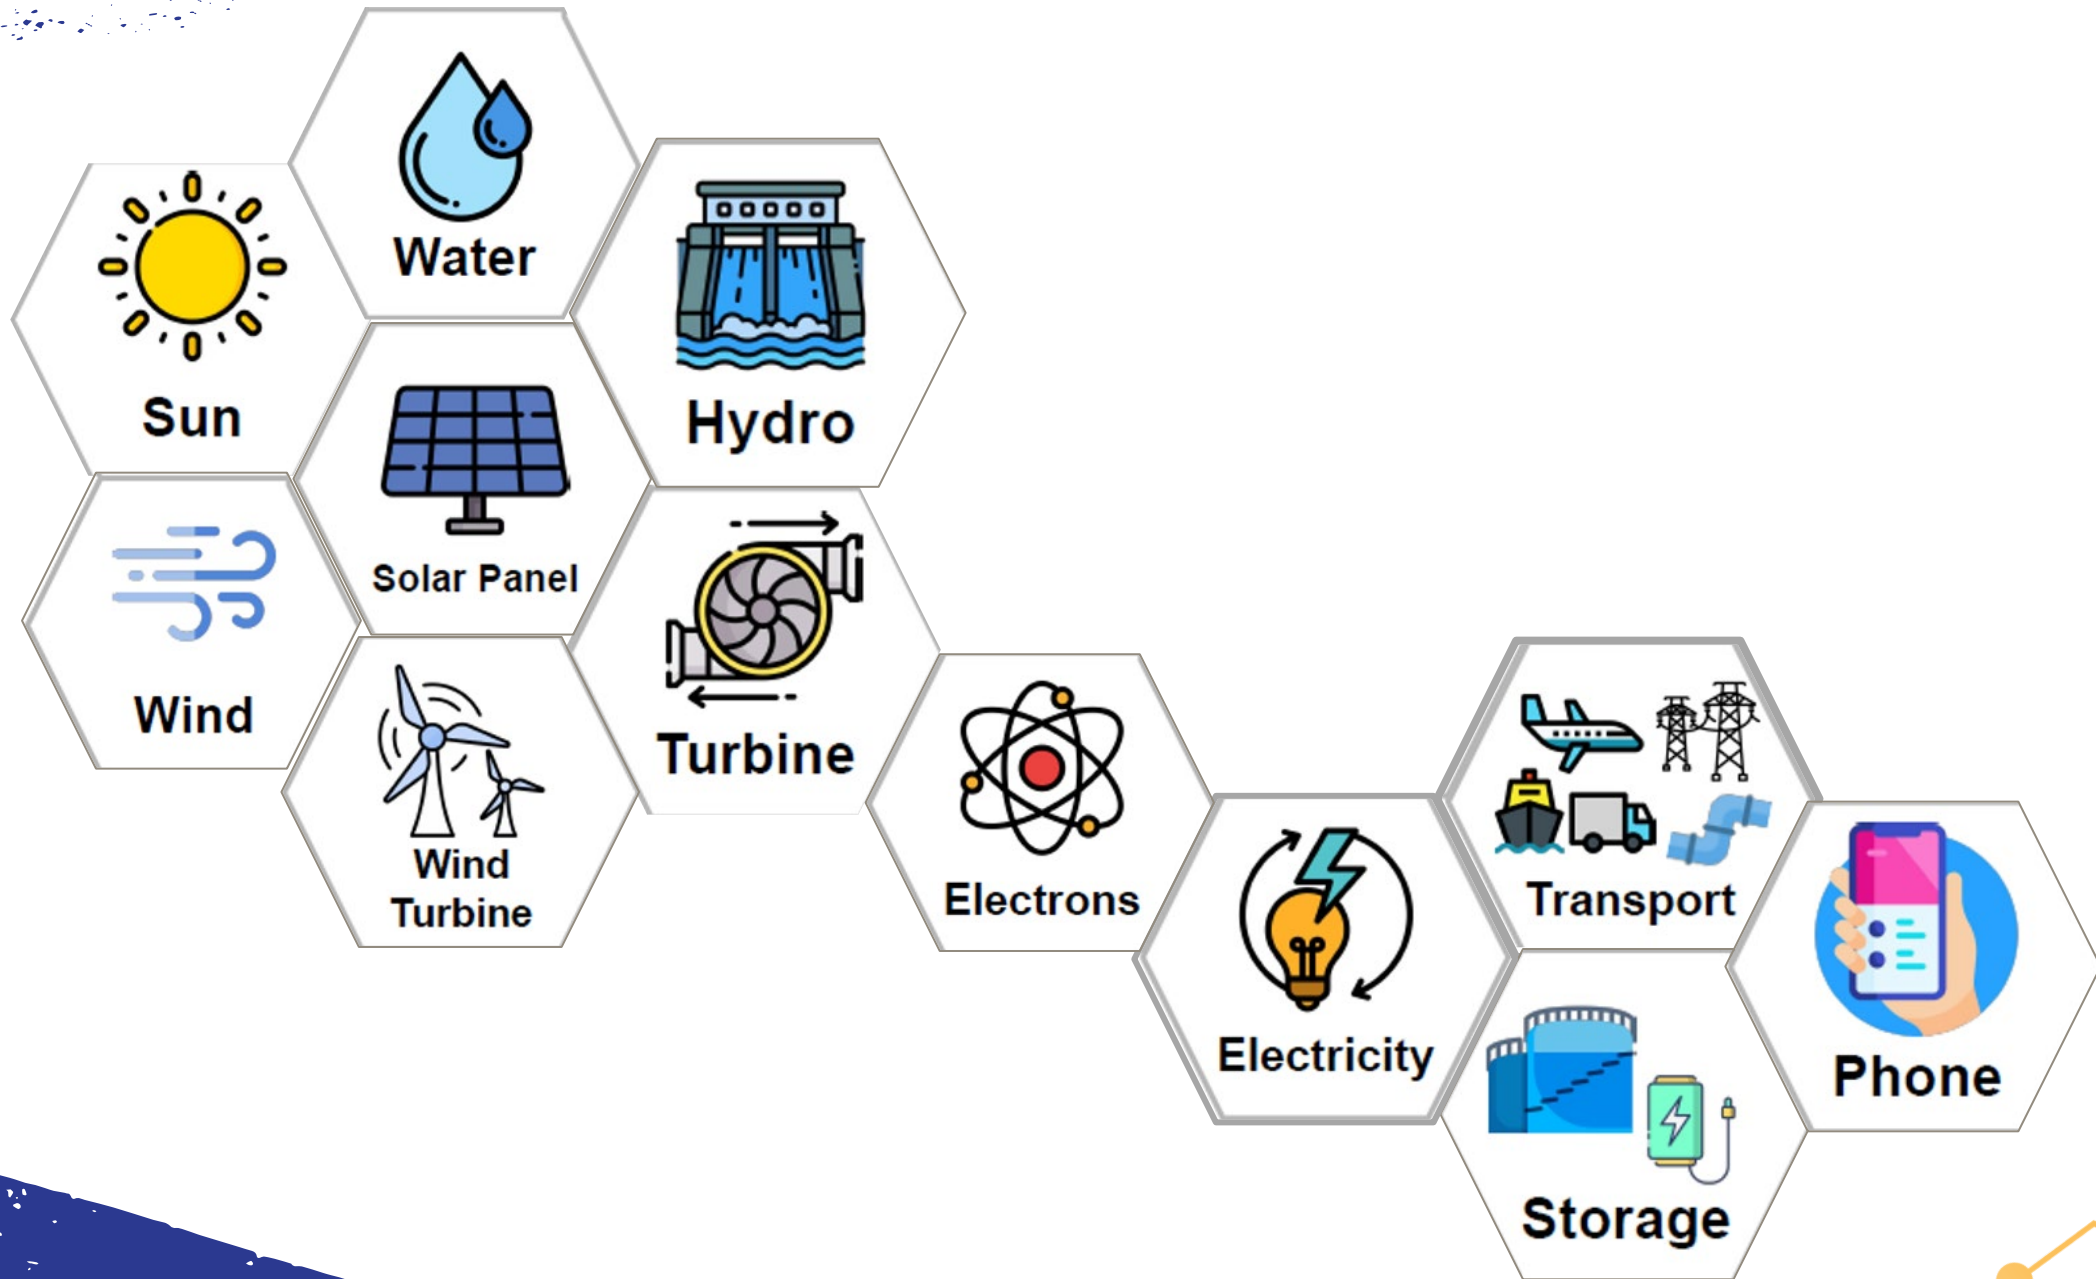

- 💡 **Explore** the energy chain tiles.
 - 💡 **Decide** how these images are **connected** to get to the “end” use of energy.
- ✓ **No islands** ✓ **Use as many tiles as you can.**

Using a Cellphone

Essential Question:

What do we do once we are done with our resources?

Carbon Capture & Storage (CCS)

Q: What is carbon?

A: “Building Blocks of Life”

Plants

Animals

Soft = Graphite

Hard = Diamonds

95% CO₂ Emissions Occur Naturally

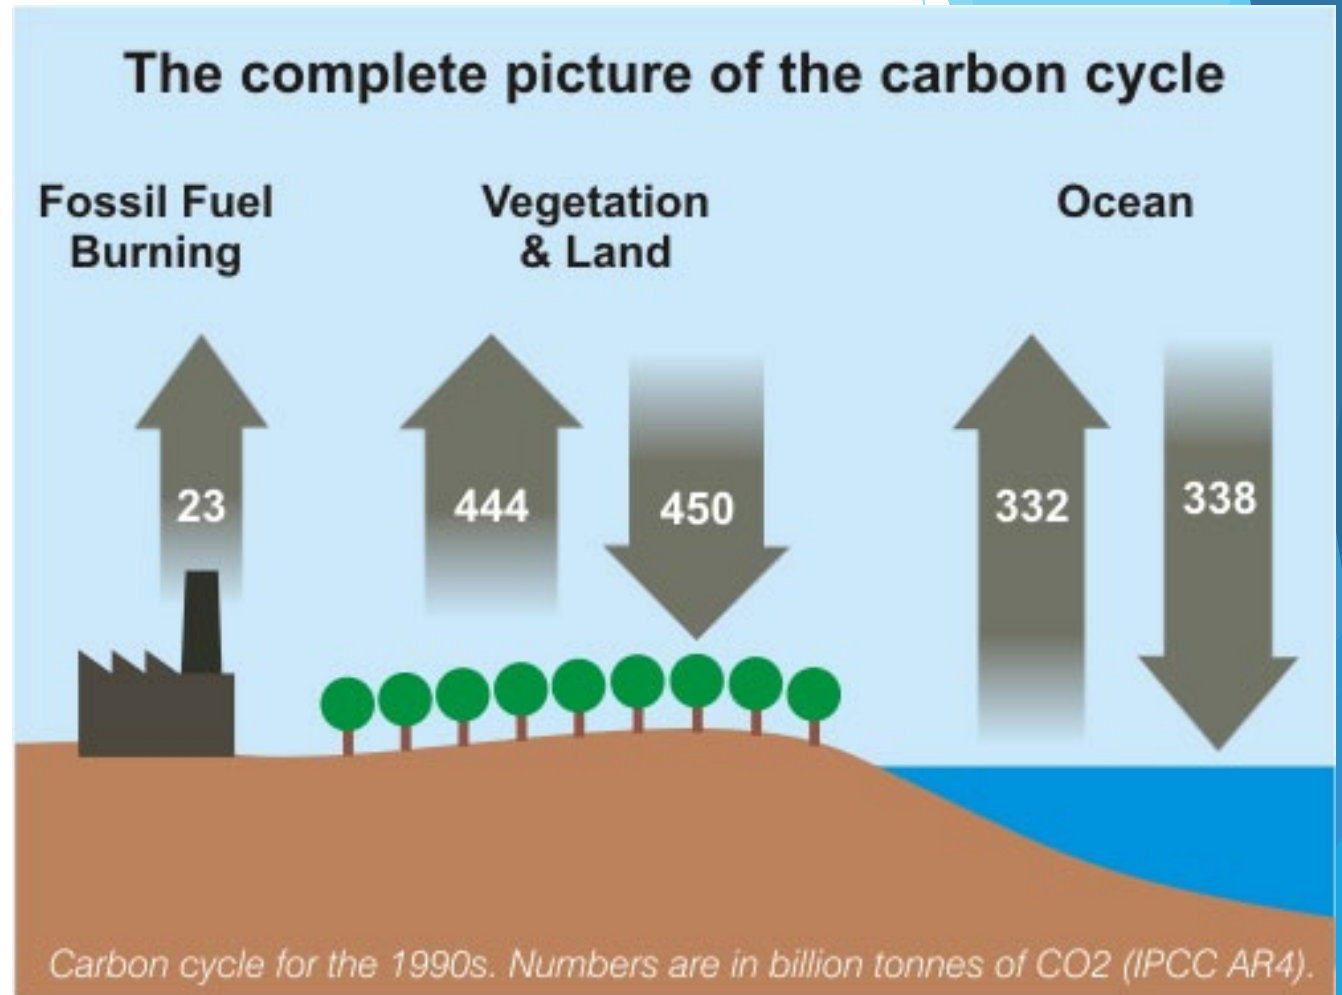

-  Volcanic eruptions
-  Forest fires
-  Plant & animal respiration
-  Decomposition of organics
-  Ocean outgassing

More is absorbed than released.

5% CO₂ Emissions Human Caused

-   Burning Fossil Fuels
-   Land Use

Need ways to capture or use CO₂

Carbon Footprint Experiment

1. Predict which color balloon will capture the most carbon?
2. On the signal . . . **lift** the balloon & gently **shake** the bottle to produce a chemical reaction.
3. **Measure** the circumference of the inflated balloon at its widest point.

Match the balloon to the carbon footprint

Which footprint is which?

?

Coal Power Plant

Natural Gas Power Plant

Airplane (or Car) Emissions

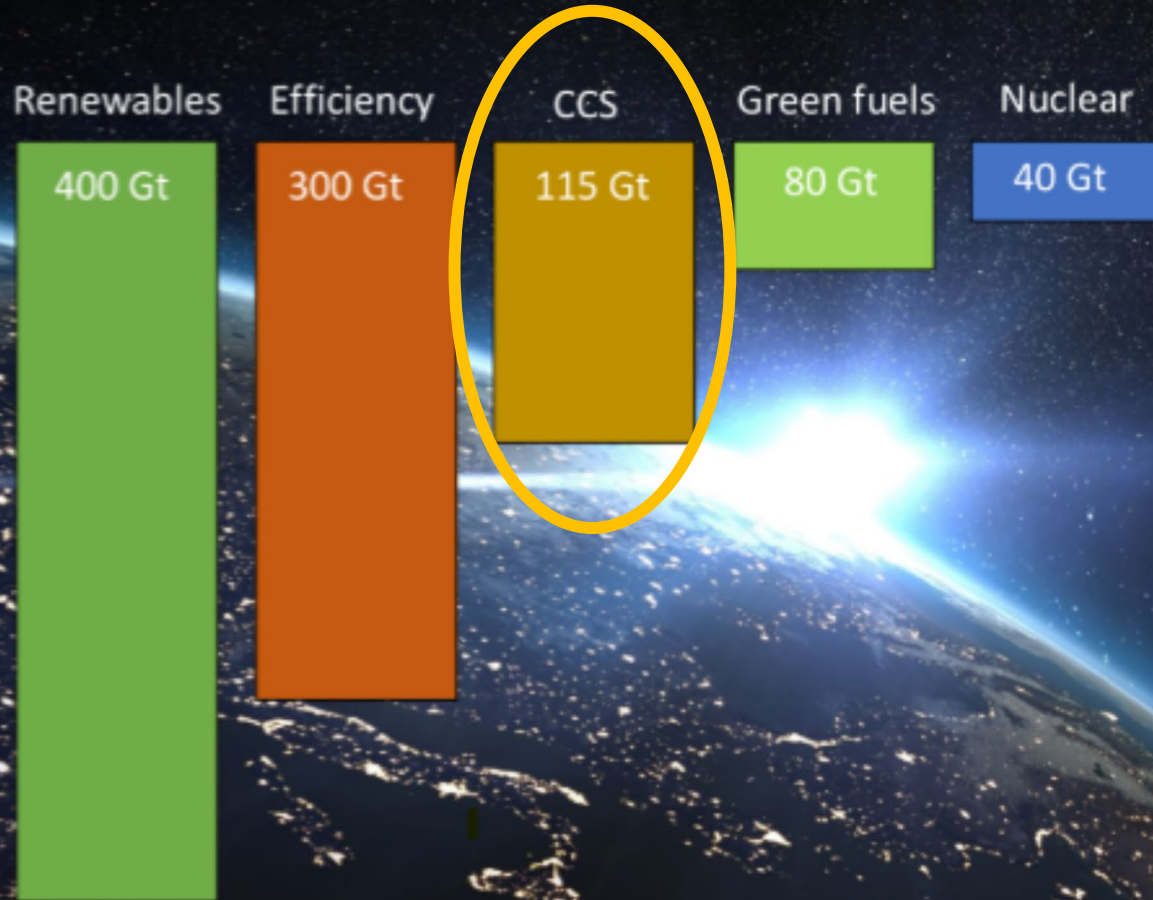

Human Riding a **Bicycle**

Think-Pair-Share: What does this tell you about carbon emissions?

Carbon Capture & Storage Needed

Climate goals will not be met without widespread carbon capture and storage

Emission reduction required by 2060
IEA: Exploring Clean Energy Pathways: The Role of CO2 Storage

U.S. Geological Survey studies underground rock layers. Scientists identify those that are most suitable for trapping and those that are good for storage. One consideration is space.

Microscope Views of Rocks:

No empty space, good for trapping CO₂ below

Blue color represents empty space, good for storing CO₂

No empty space, good for sealing CO₂ above

Geologic Carbon Sequestration

Geologic carbon sequestration is capturing carbon dioxide from industrial processes and the atmosphere. It is then turned into a liquid and injected deep underground.

Design Challenge:

Most absorbent

storage for your liquid carbon

Limited Selection:

Up to

3 different items

Design Considerations:

- Porosity
- Permeability
- Cap Rock Placement

1. How much liquid CO₂ did your carbon “sink” hold?

2. What does each layer represent?

3. What could you do to improve this carbon storage design?

Note: we flip our carbon storage cups “upside down” and use **gravity** to simulate increased **pressure** found deep underground.

How do we extract and develop our resources?

Jobs in Alaska

*“As someone newer to Alaska, and to modern resource extraction industries, I was ill-prepared to advise about related career paths. **Now I can credibly offer insights and advice about job opportunities, work environments, and education paths.**”*

– East High School teacher

*“Ever since I was a little, I wanted to become a biologist and study wildlife, but I never thought it could be possible. This class has shown me **it is possible** and there are **many job opportunities and different paths in Alaska.**”*

– Dimond High School student

*“I feel like my experiences really **changed my perspectives on both natural resources and future careers available to me.** I also think that the opportunities we had allowed me to **gain confidence** asking questions and interacting with professionals.”*

A group of students are gathered around a table in a classroom, working on a project. They are looking at papers and documents spread out on the table. The scene is dimly lit, with a dark overlay. The text 'OUR ASK:' is overlaid in large, white, outlined letters on the left side of the image. To the right, there is a list of three bullet points in white text, separated from the main text by a vertical line.

OUR ASK:

- Financial support during a time of uncertainty at the State and Federal level.
- Get involved! Help us help kids understand the importance of our natural resources.
- Reach out to us and learn more about how you can help support our mission and statewide efforts.
