TANANA RIVER BRIDGE SITE NOV. 9 — 1922.

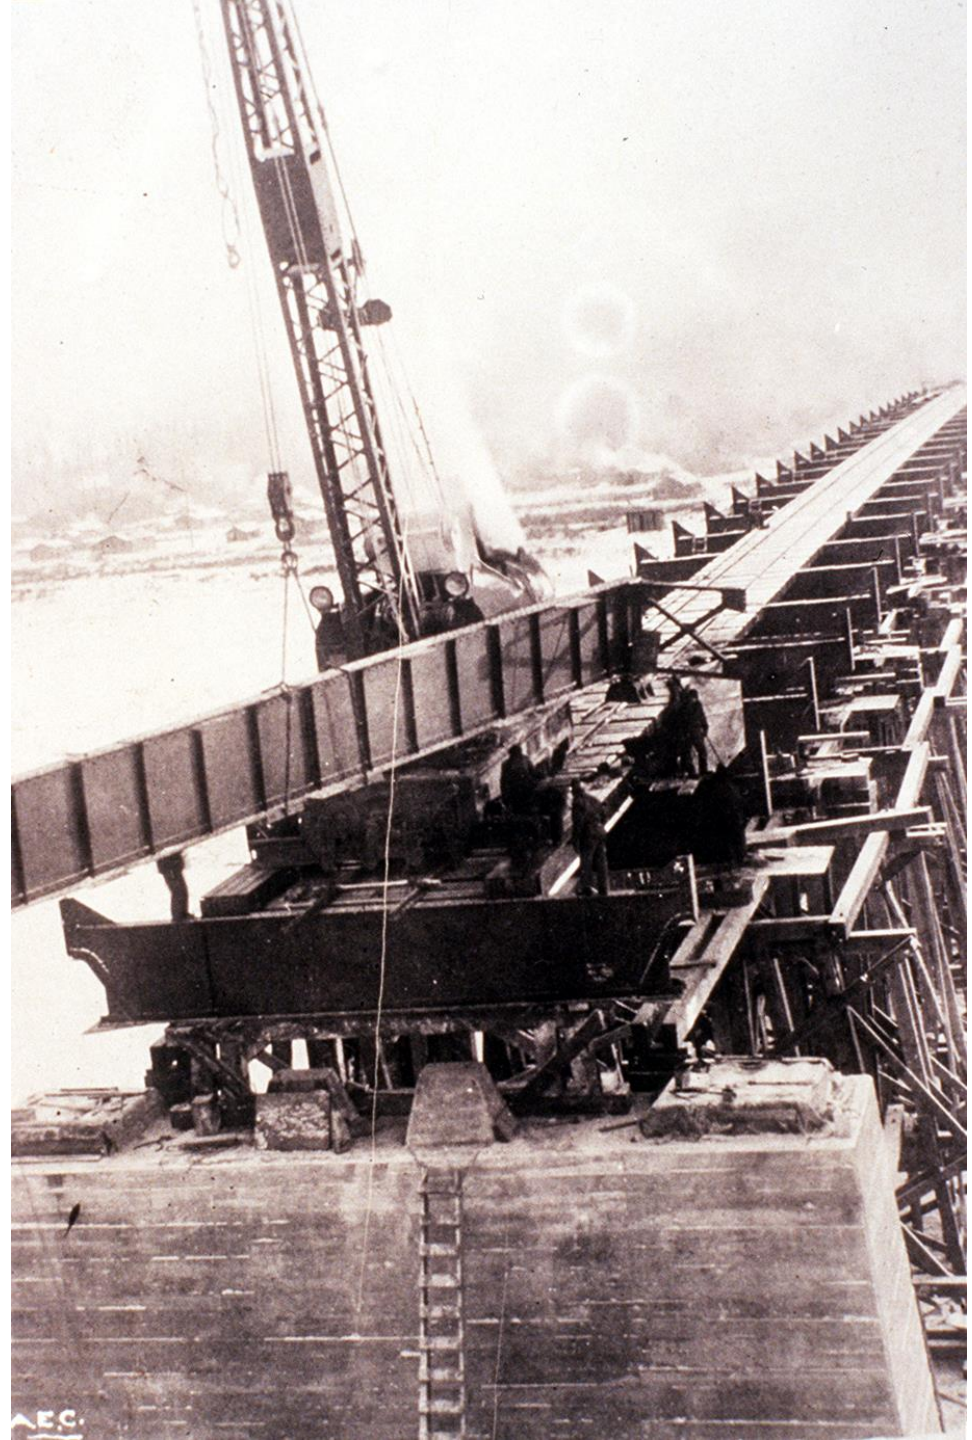

Bridge 47.8 in Loop District between Seward and Portage. Constructed in 1919 of select structural grade timber, no longer obtainable. Note falsework bents supporting the 121 ft. deck span. Timbers in this structure have been reduced to approximately 67% of original strength by decay. Monthly inspections are now required to insure safety. All bridges in the Loop District should be replaced immediately if this portion of the line is to be kept in service.
